

ANSWERING THE CITY OF OAKDALE / OID TAX QUESTION: Prior to answering this question let's build a foundation on the purpose of taxes. From the County's webpage, "California State Law prescribes that all real estate owners pay property tax to support local public services such as schools, law enforcement, fire protection and general government administration." The amount of assessment is then voted on by the affected public; that again is the law-no tax can be assessed without a vote. So the perception that there are "hidden taxes" being assessed is baseless. The "Table" in this report identifies the 13 "local service" providers that receive taxes generated from within the city limits of Oakdale. This Table was provided by Todd Filgas, Property Tax Division Manager from the Stanislaus County Auditor Controller's office. It was provided back in April 2016 in answer to a similar public inquiry and is representative of the 2015/2016 tax year.

As one can see, OID is one of 13 local agencies that receives a percentage of City generated tax dollars. The percentage of tax dollars each service provider receives is shown in the right hand column. You may or may not receive all of these services. Again, under the law, that is not the purpose of a tax. There does not have to be a correlation between the taxes you pay to the actual service you personally receive. The taxes we pay are for the good of all Oakdale residents whether that resident actually receives a direct benefit from that agency. Think about it; if your house didn't catch fire last year you're not entitled to get a rebate from the fire district. If you got a mosquito bite in 2016, that doesn't mean the Abatement district has to give you money back in 2017. If you don't have any kids in school or you don't use the local Community College...same response. These services are there if and when you decide to use them.

Oakdale Irrigation District received 5.48% (Table) of those tax dollars generated within City limits during the 2015/2016 tax year. That totaled \$1.067 million. There are currently three principle services OID makes available to the City;

1. Stormwater drainage for portions of the City, mostly the area around the hospital and catch basins around 5th and C Streets. If not for OID providing a drainage outlet for the City's stormwater needs in those areas they could not have developed until the city bonded, built and assessed residents for the construction of a stormwater collection system.
2. Industrial waste water removal from City businesses under a State discharge permit. The City was discussing added fees to some large industrial dischargers to the City's waste water treatment plant. Trying to keep a business friendly environment for our City, OID worked with the dischargers and the State's Regional Water Quality Control Board to secure an industrial discharge permit into OID's canal, 24/7/365.
3. Water availability to 10,000 acre feet (and growing) of Stanislaus River water. OID operates and maintains a \$20 million dollar a year facility for the delivery and availability of water to all lands in its service area. That's why OID exists. The City of Oakdale occupies 3,500 acres of OID's 82,000 acre service area. Until and unless the City agrees to detach/de-annex from OID, OID has to forever keep enough water "available" to meet the land demand of that 3,500 acres. At 3 acre feet per acre, that's roughly 10,000 acre feet today. As the City grows the availability to water for the City also grows. The City of Oakdale will always have the availability to water as long as it is in the service area of OID. In today's world of water, that availability and security is now priceless.

Every acre or parcel in the OID service area pays \$27.81 dollars per acre (minimum charge of \$55.62) base rate charge. City lots pay this charge through their "property tax" as opposed to annual billing from OID. There's about 7,000 lots in town, most lots are less than two acres in size, thereby accounting for \$390,000 of the \$1.067 million in property taxes received by OID from the City. If after reading this you say, "I'm not getting my tax dollars' worth from OID, so if the City detached/de-annexed from OID, how much would I personally benefit?" Two options says the County;

Option 1: The City could detach or de-annex from OID, severing that relationship. The City could then build its own stormwater pipeline to the Stanislaus River for the hospital area and the "C" Street systems and collect and treat all industrial waste water at its water treatment plant, if capacity permitted, and give up any access to OID surface water to meet its future needs. If the City did all that they could get the \$1.067 million OID currently receives. Under this option though, there would be no change to City resident's annual tax bill. The City would simply provide the services currently being provided by OID except for the access to water, that availability would be gone.

Option 2: If the City detached or de-annexed from OID and the City decided not to invest any money in providing stormwater collection and drainage to the areas previously identified (let the streets flood) and told industrial dischargers in the City to provide their own wastewater disposal and treatment at their own cost, and abandoned any right to a future/alternative water supply from OID, the \$1.067 million OID currently receives would be put back into the general

tax pool and be redistributed. With OID taken off the Table, its current 5.48% allocation would be reallocated to the other agencies on a pro-rata share. In the case of the City, its current 8.04% would increase to 8.51% of the total property taxes collected. Doing the math, the City would gain approximately \$90,800 from OID ceasing delivery of all current services. Again, this alternative would not result in a change to each resident's property tax bill but would increase the flow of money to the City by \$90,800. If the City were to send each resident a rebate check for their overall benefit (which is unlikely) it would amount to about \$12.97 after dividing it amongst the 7,000 lots in town.

At this point, rather than discuss the pros or cons of \$13 dollars a year I'd like to offer you an Option 3. Option 3 is to take a deep breath and relax. Both the City and OID have agreed to look at this very issue over the coming months. We will also be looking to develop Mutual Aid Agreements on common cross-over services to reduce operating costs for both agencies. Collectively working together we see reclamation projects that can generate positive cash flow to both our agencies and that indirectly will benefit you, but we need a little time. Frankly, working cooperatively on our futures is much better than working apart. Divided camps and entrenchments may be common elements in D.C. but it's not the Oakdale way. Give us, the City and OID, time to get this done and we will give you back answers. We think you'll like them. Thank you.

Property Tax Distribution to Oakdale Irrigation District from within City of Oakdale Boundaries

Tax Code	Description	Gross Total	ERAF Tax Shift	Net Total	Allocation Percentage
00010	COUNTY-GENERAL FUND	3,540,877.35	(1,944,659.04)	1,596,218.31	8.19%
